Integration of Early Childhood Reflexes & Reactions

with

Renate
Wennekes

Founder of Developmental Kinesiology,
Director of Institute fuer Kinesiologische Lernfoerderung
International Faculty Member of the Educational Kinesiology

Developmental Kinesiology gives the possibility to recover our inborn experiences, competence and life energy. We work with our childhood experiences, by balancing the senses and the natural movement development.

Pre-Requisite: Brain Gym Basic 101

Reflexes and reactions escort us as we make our way into the world. They provide us with our first movement experiences, help to support the development of our senses and ensure our survival during and after birth. They make it possible for us to instantly react to our environment and to attract an environment that will properly care for us. Many subsequent functions and abilities build on appropriately integrated reflexes.

Reflexes need to develop for their intended purpose, integrate into the system, inhibit or disappear only if it has successfully completed the job it was designed to do. If these reflexes remain active, they are said to be inappropriately retained and may cause extra stress on the central nervous system, leaving less energy and function for other development and learning.

This workshop will help people to understand all about childhood reflexes, their emergence and how to integrate and move through their developmental stages that were not integrated efficiently during their childhood years.

It is therefore possible to give the brain and body a 'second chance' to register the reflex inhibitory movements patterns which should have been made at the appropriate stage of development. As these reflexes are corrected, many of the physical, academic and emotional problems of the child will disappear.

Children who are having these challenges listed below will benefit greatly:

- Dyslexia
- Autism
- ADD/ADHD
- Postural imbalances
- Poor coordination
- Poor eye-hand coordination
- Bedwetting beyond 5 years old
- Speech delay
- Low muscle tone
- Hypersensitivity/under-sensitivity to incoming stimulus

Course Details

Date : 27-29 Mar 2012

Fees : \$680.00

Venue : The Brain Gym Playhouse
Blk 744, Bedok Reservoir Road
#01-3041 Singapore 470744

Closing date: **6 Mar 2012**

For Enquiries, call Sumiati @ 98221931
